

# Wonders of Waste WOW

1<sup>st</sup> Special Nursery school of Patras, Greece

ACTIVITIES September – October 2019

# COMPOSTING BOX

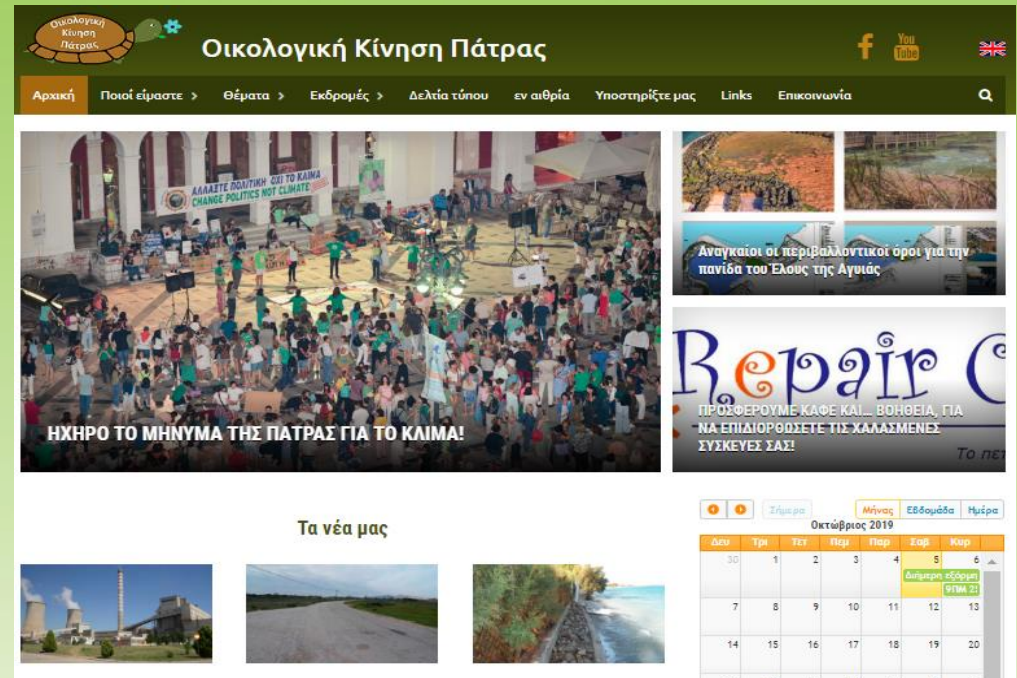

“...plan the implementation of the **composting box** in the school yard and define the person in charge for composting and agricultural activities...”

We have already a composting box and we are going on this year with this activity. All teachers are involved in this task.

# ECOLOGICAL NGO

“...contact local authorities and potential local partners (non-governmental organisations)...”

Most of the school staff are active members of the ecological organization: “**OIKIPA – Ecological Movement of Patras**”. We have close contact and we are cooperating in many ecological projects.

# The RUBBISH FAMILY bins

This is the greek family!

# The RUBBISH FAMILY bins

Mr. Rubbish, the biggest bin, for non-recyclable materials, Mrs. Rubbish, for plastics, and Babies Rubbish for cans and paper

# The RUBBISH FAMILY bins

That's a very good idea, because until today, we had only a blue bag, given by the Municipality, for recycling of just paper and glass..

# SCHOOL FLEA MARKET

“...each kindergarten will start thinking and organizing an area in the school or a “virtual” market where children's parents can easily exchange used items...”

In the basement of our school, we have organized a clothes' second hand flea market. We accept CLEAN clothes and shoes in good condition and we sell them in very low prices as an extra income for helping school's budget or give them for free to the poor children and their families.

# ROSE OF JERICHO

“...each school will buy a resurrection plant to learn the miracle of life through water...”

We bought the ROSE and started to give it water! And we all AMAZED of how it started to open, grow and get GREEN!!  
And when we stop watering, it became brown again!
