

Wonders of Waste

Project activities

June – September 2022

1st Special Nursery school of Patras, GR

This presentation displays the activities we have done in our kindergarten in June 2022.

They are a part of the topic RECYCLE – the final topic of our project - that has started in June and will end up in November.

Most activities are a follow up from those which we have started previously in the project, used as educational tools to enrich the pedagogical curriculum.

We also tried to teach our students how to recycle materials (mainly paper) in order to reduce our waste imprint on the planet.

The activities you will see may seem very simple, but you have to consider that our students are of a low ability due to their special needs and each and every small successful task is a big improvement!

Our garden (second part)

Potato plants grown up successfully and the time came to pick up the potatoes

Our garden (second part)

Actually our potatoes weren't too big but totally biological!

Our students were really happy to see the results of potato gardening!

Our garden (second part)

We picked them up and transferred them in our class for educational activities

Our garden (second part)

The washed potatoes used to make some sensory games (how it feels) and math / size comparisons (size sequences, big – small ect)

Our garden (second part)

And then Ohhh you can just imagine....

... as unhealthy!

Park of environmental activities

Each year in June, the Environmental Education Directorate of our Prefecture organizes an Environmental fair, where schools can visit and be informed about the ecological activities that various organizations, associations and eco groups have implemented throughout the year. Also local groups demonstrate objects, art crafts, environmentally friendly methods in everyday life. Kids can play eco games and enjoy theater performances related How to Save our Planet.

Our students visited this park with their teachers, parents and siblings and enjoyed all the activities while informed also how to Recognize -
Reduce – Recycle - Reuse

Park of environmental activities

Banners and information materials about Environment

Park of environmental activities

Promotion of water saving and recycling

Park of environmental activities

Games: Eco Snake (our students had a lot of fun!)

... and we took the chance to bring our wastes (ink cartridges) for recycling

RECYCLE!

Paper recycling

The Environmental Education Directorate of our Prefecture prepared and implemented a large scale project of providing special (“yellow – blue”) bins to every school, as to encourage all students and staff to recycle all the waste **papers** of schools. (it is additional to the normal blue bins about all kinds of paper)
A special seminar was given to all teachers of how to deal with this special bin with details on how to use it.

Also directions given by a handbook and promotional materials.
Such a bin has been situated in the yard of our school and students are taught about the procedures of paper recycling.

Results of this project will be measured and published in a special edition.
The Patras Municipality is also supporting this initiative by managing the waste papers of the bins.

Paper recycling

Informative meeting of all the staff and the students of the nursery and primary special schools about how to use the special bin.

Paper recycling

Leaflets and brochures about the advantages of paper recycling and detailed information about the procedures.
